

# Documenting Common ADEs using the Integrated Problem List

1. In the RPMS-EHR, navigate to the **Problem Management Tab** of your RPMS-EHR and select the **Integrated Problem List (IPL)**.
2. Click the **'Pick List'** button.

3. Select the **Adverse Drug Event Pick list** and choose the adverse drug event you wish to document. If the adverse event does not appear in the pick list or if you would prefer to search for the appropriate term, you can search for the event the same way you search for other SNOMED terms.

A sample Adverse Drug Event pick is available in the RPMS-EHR. Talk with your Clinical Applications Coordinator (CAC) if you would like to add or modify options on the pick list.

4. Select the Adverse and **add as a problem and POV** as appropriate.
5. Document the suspected cause of the Adverse Drug Event in the **'Provider Text' field**.
6. Select **sub-acute** to identify it as a non-chronic condition.
7. Click the **'Save'** button.
